Name of Product	Bee Propolis Capsule	specifications	500mg/Capsule	lot number	20250927		
A. Pre-production inspection							
inspection item	Inspection CONTENT				Result		
Sanitation	Clean door/window/floor/wall/air inlet/air outlet, etc., to meet requirements				Yes ☒ No ☐		
	The door/window/floor/wall/air inlet/air outlet, etc., should be cleaned again to meet the requirements.				Yes ☐ No ☐		
Personnel hygiene	All operators hold valid health certificates for employment.				Yes ☒ No ☐		
	All operators have standardized the change of work attire and undergone disinfection.				Yes ☒ No ☐		
Equipment and Facilities	The equipment, containers, and tools used have been cleaned or sanitized, and the equipment inspection is normal.				Yes ☒ No ☐		
	The equipment, containers, and tools used were re-cleaned or re-cleaned to meet the requirements.				Yes ☐ No ☐		
	The dust removal system is operational.				Yes ☒ No ☐		
Calibration	The required weighing instruments are within the valid calibration period.				Yes ☒ No ☐		
Line Clearance	The last batch of products has been cleared and approved upon completion of production, and remains valid.				Yes ☒ No ☐		
	Clear and pass				Yes ☐ No ☐		
Temperature & Humidity	Temperature and humidity control in the production area meets the requirements				Yes ☒ No ☐		
	Temperature and humidity in the production area have been readjusted to meet the requirements				Yes ☐ No ☐		
Checked by		Production Manager		QA Verification			
B. Temperature and humidity monitoring in the operating room (twice per shift, required temperature: 18°C–26°C, relative humidity: 45%–65%)							
production processes	time	temperature (°C)	relative humidity (%)	time	temperature (°C)	relative humidity (%)	Inspector
Weighing & Blending	8:10	20	48	12:31	20	48

C. Material Requisition: 1. Prepare accurate raw and auxiliary material requisition and delivery orders based on production orders, and submit them to the warehouse department; 2. During material requisition, meticulously verify product name, batch number, specifications, quantity, and inspection certificates, with designated personnel conducting secondary verification; 3. Standardize cleaning, disinfection, and unpacking procedures before materials are transferred to the workshop's temporary storage area.

D. Pre-treatment (Grinding): 1. According to the process specifications, transport the material to be ground to the grinding room for processing. Replace the sieve with the specified mesh size (pre-inspected), activate the circulating cooling water, and inspect the dust collection bag for integrity; 2. Standardized site clearance must be performed during the grinding of two different materials.

name of material	Milling Mesh Size	Weight Before Milling (kg)	Weight After Milling (kg)	Operator
	/		/	

E. Weighing and Mixing: 1. Transfer materials from the receiving area to the weighing and mixing operation room; 2. According to the process formula, one person performs the weighing and mixing while another conducts verification, with timely documentation; 3. Attach clear identification labels to the material containers; 4. After weighing, any remaining raw or auxiliary materials that are no longer used shall be properly packaged, sealed, and labeled before returning to the warehouse.

NO.	Material specifications and names	Batch No. / Receipt No.	Test Report No.	Weighed Quantity (kg)	Remaining Quantity (kg))
1	Propolis Powder	H00182-2050922	25002	63	11.2
2	Calcium Carbonate	H00113-20250327	25003	39.9	8
3	Magnesium Stearate	H00005-20250711	25001	2.1	5.37
4					
Total ingredients (kg)		/	/	105	/
